In the Claims

Claims 1-6 (Cancelled)

7. (Currently Amended) A method for making a ferritic stainless steel sheet, comprising the steps of:

hot-rolling a steel slab comprising about 0.01 percent by mass or less of carbon; about 1.0 percent by mass or less of silicon; about 1.5 percent by mass or less of manganese; about 11 to about 23 percent by mass of chromium; about 0.06 percent by mass or less of phosphorous; about 0.03 percent by mass or less of sulfur; about 1.0 percent by mass or less of aluminum; about 0.04 percent by mass of nitrogen; about 0.0005 to about 0.01 percent by mass of boron; about 0.004 to 0.3 percent by mass or less of vanadium; about 0.8 percent by mass or less of niobium and/or about 1.0 percent by mass or less of titanium wherein 18 ≤Nb/(C+N)+2(Ti/(C+N)) ≤60; and the balance being iron and unavoidable impurities to form a hot-rolled sheet;

annealing the hot-rolled sheet to form an annealed sheet;

cold-rolling the annealed sheet either once or at least two times with intermediate annealing to form a cold-rolled sheet; and

finish-annealing and pickling the cold rolled sheet to form a pickled steel sheet containing crystal grains having an average crystal grain diameter of about 40 μ m or less and has an average surface roughness of about 0.3 μ m or less.

8. (Original) The method according to claim 7, wherein the steel slab further comprises at least one of about 0.1 to about 1.0 percent by mass of copper; about 0.05 to about 0.2 percent by mass of cobalt; and about 0.1 to about 2.0 percent by mass of nickel, wherein $0.05 < (0.55 \times \text{Cu} + 0.85 \times \text{Co} + \text{Ni}) < 0.30$.

- 9. (Original) The method according to claim 7, wherein the steel slab further comprises about 0.0007 to about 0.0030 percent by mass of calcium.
- 10. (Original) The method according to claim 8, wherein the steel slab further comprises about 0.0007 to about 0.0030 percent by mass of calcium.
- 11. (Original) The method according to one of claims 7 to 9, further comprising skin-pass rolling the pickled steel sheet.
- 12. (Original) The method according to one of claims 7 to 10, further comprising forming a resin coating film having a thickness of about 2.0 μ m on a surface of the ferritic steel sheet.
- 13. (Original) The method according to claim 12, wherein the resin coating film comprises a urethane resin.
- 14. (Original) The method according to claim 12, wherein the resin coating film comprises an epoxy resin.
